PURPOSE
Observations provide the backbone for the science of meteorology. Regardless of your intended path in the atmospheric sciences, observations of the atmosphere will surely influence your career. So that you can properly interpret observations in your endeavors, you must understand the physics and limitations of common instrumentation. For example, predicting the weather requires an accurate initial state of the atmosphere and land surface. What good scientist would trust a model forecast without understanding the quality of the observations ingested as initial conditions? Can a climatologist properly assess climate change without understanding the characteristics of historical instrumentation or how instruments and observing sites have changed over time?

OBJECTIVE
This course is intended to equip meteorology majors with an understanding of the concepts involved in making careful meteorological measurements and to provide you with a fundamental understanding of historical and modern instrumentation. You will learn about the limitations of instruments and how to interpret instrument specifications, and you will identify the major errors associated with measurement output.

PROFESSOR
Dr. Christopher Godfrey
Office: Robinson Hall, room 231
Phone: 828-232-5160
E-mail: cgodfrey at unca dot edu
Office hours: 11 a.m. to noon Tuesday and Thursday, or by appointment. If my door is open at any other time, please drop in.

CLASS INFORMATION
Meeting times: MW 2:45–4:00 p.m.
Location: Robinson Hall, room 238
Website: http://facstaff.unca.edu/cgodfrey/courses/atms320/

GETTING QUESTIONS ANSWERED
I will be in my office during scheduled office hours, but if at any other time you have a question and my office door is open, you are more than welcome to visit. Otherwise, e-mail is the best way to reach me. You may also schedule an appointment with me. Please don’t hesitate to ask questions about class, other coursework, or the stresses of college life whenever the need arises.

*Out of fairness to all, those who are graduating this semester may not take the final exam at a different time.
This course outline is approximate and subject to modifications.

1. Introduction to measurement systems and meteorological data collection
2. Major modern measurement systems (Mesonet, ASOS, rawinsondes, etc.)
3. Site selection
4. Basic electronics
5. Signal sampling
6. Static performance characteristics
7. Barometry
8. Thermometry
9. Dynamic performance characteristics
10. Anemometry

With available time, we will cover the following:
11. Precipitation measurement
12. Hygrometry
13. Radiation
14. Soil moisture
15. Electric field and lightning measurements
16. Quality assurance

EVALUATION

There will be two preliminary exams and a comprehensive final exam to assess your progress through the semester. The preliminary exams will take place during regular class meeting times. Several problem sets will strengthen your skills and reinforce the lecture and reading material. Some classes will also include lab exercises (I’ll let you know about these at least one class in advance) so that you can play with some of the neat tools that we’re studying.

There will be no opportunities for make-up labs or exams. Exams must be taken, and labs completed, on the scheduled date. The only exceptions to this rule are: (1) serious medical condition (illness or injury) of you or an immediate family member; (2) University excused absence; (3) jury duty; or (4) military orders. Only in such instances will an item be dropped or rescheduled depending on your best interests, but only if I am notified at least 24 hours in advance. Except under the circumstances described above, homework is due at 5:00 p.m. on the scheduled due date. This will allow you to run home and get your completed assignment if you forgot it! I will accept homework up to 24 hours late (5:00 p.m. the following day) for a 50% late penalty. Homework more than 24 hours late will not be graded. In the event of an unforeseen circumstance that causes you to miss an exam, lab, or homework due date, you must notify me by phone or e-mail within 24 hours of the event. Appropriate documentation must accompany any excused absence and should be attached to a late homework assignment.

ACCOMMODATIONS FOR BABY

This fall is special for the Godfrey family because we are expecting a baby girl in late September! Consequently, I am taking a few weeks off after her birth to get to know her. I will do my best to keep the course on track and interesting with guest lecturers, lab exercises, and substitutes as needed. I appreciate your patience and flexibility.
GRADING

<table>
<thead>
<tr>
<th>Component</th>
<th>Weight</th>
</tr>
</thead>
<tbody>
<tr>
<td>Preliminary Exams</td>
<td>25%</td>
</tr>
<tr>
<td>Labs</td>
<td>25%</td>
</tr>
<tr>
<td>Homework Assignments</td>
<td>30%</td>
</tr>
<tr>
<td>Final Exam</td>
<td>20%</td>
</tr>
</tbody>
</table>

I reserve the option to curve the final grades upward at my discretion. However, you are guaranteed at least the following based on your final score before applying any curve:

- **A**: ≥92.0%
- **A-**: 90.0–91.9%
- **B+**: 88.0–89.9%
- **B**: 82.0–87.9%
- **B-**: 80.0–81.9%
- **C**: 78.0–79.9%
- **C-**: 72.0–77.9%
- **D+**: 68.0–69.9%
- **D**: 60.0–67.9%
- **F**: <60.0

Final grades are not negotiable. If you see a problem with any other grade, you may plead your case no later than 14 days from the date I return the assignment to the class. I do make mistakes (occasionally)! Under no circumstances will your grade be lower if you see me with a question.

ACADEMIC INTEGRITY

Since the point of this or any class is to learn, you may collaborate on homework assignments, but you absolutely must make sure that you hand in your own work. Copying your friend’s answers will not only be obvious to me, but will result in both of you sharing the credit for that answer. For example, if you do a fantastic job on the homework assignment and then let three of your friends copy any part of it, you will each receive a maximum grade of 25% for the assignment. Any collaboration on exams is simply cheating. I have zero tolerance for academic misconduct and will deal with the problem by immediately filing charges through the regular University channels.

NOTES

Students with disabilities who require accommodations in this course are requested to speak with the professor as early in the semester as possible. Students with disabilities must be registered with the Disability Services Office prior to receiving accommodations in this course. The Disability Services Office is located in University Hall room 219, phone 828-232-5050.
