*==>rain on 18 Mar 2022 prevented calibration trials at g105, **==>very strong wind gusts knocked over tripod at Hurricane Ridge...must complete calibration trials at a later date [16 April 2022], ***==>snow and wind require postponement of calibration trials, ^4==> extratropical cyclone with strong winds and ~1.00 rain accumulation; inappropriate for calibration trials, ^5==> tree clearance work needed on backcountry roadway, ^6==> tree fell on g #307 on 3 January 2022

Gauge visitation in support of the Duke Great Smoky Mountain Rain Gauge Network (GSMRGN) during the spring 2022 campaign occurred over fourteen days spanning a period of ten weeks in March - May 2022. The primary purpose of the visits in the spring 2022 was [1] to perform downloads of gauge tip observations since the previous gauge visits in the autumn 2021, [2] to complete rain gauge and data logger maintenance tasks, [3] to clear vegetation and tree limbs and, [4] to calibrate ALL rain gauges since field calibrations were last completed in the spring 2021. Eleven technicians and volunteers (listed on the front page) made the visits and performed the required work. It is important to note that the volunteers were NOT directly involved in any critical gauge visit tasks, but were volunteering primarily to assist with personal safety should someone get injured during a particular series of gauge visits.

The general tasks completed at every gauge visit consist of (1) gauge data download from the data loggers [DD in Table 1], (2) general gauge maintenance and ML1 logger condition monitoring [MN in Table 1], (3) clear vegetation within a five foot radius of the rain gauge [CV in Table 1], and, (4) calibration of rain gauges using a single trial of the 50, 100, and 300 mm nozzles [CA in Table 1]. The primary specialized task was the

replacement and repair to gauges experiencing damage due to tampering by bears (g #110 and g#111). The former gauge (#110) has recently had a consistent problem with being pushed over by a bear. A fence was installed about g #110 on 22 April 2022 to discourage continued problems. A motion-activated alarm failed to prevent the bear from tampering with the gauge. The latter gauge (#111) was a rare event. Unfortunately, the gauge cover was pulled off, the data logger was exposed to the weather elements for an indeterminate period, and the gauge tip observations were irretrievable from the damaged data logger. The minimally damaged rain gauge funnel cover was retrieved down the mountain from the gauge location and a new logger was installed on 19 March 2022. The bear had to climb over the fence to tear the funnel cover from the rain gauge base. It is hypothesized the bear mistook the rain gauge for a bird feeder (food source) as the gauge rests on property at the top of a mountain on which numerous houses are situated mid-mountain and at its base. Task (1) merely required a serial port link between the field study laptop and the gauge data logger and consisted of pulling the data (often in files having raw [*.txt] and CSV formats) onto a desktop folder on the laptop, checking for completeness of the data, and comparing the data logger time and date to the actual GPS time and date (making a screenshot of the time comparison). The standard that has been chosen for this study is to maintain the clocks on Eastern Daylight Time, since most of the “warm” precipitation will be occurring during the season when EDT is in effect. Most ML1-FL data logger times have been adjusted (using “TA” command) during previous gauge visits to coincide with the EDT given by the GPS locator. Task (2) required the cleaning of debris from the funnel filter, cleaning the tipping buckets of debris (if necessary), cleaning the gauge drain ports and siphon, re-leveling the gauge if it has come unleveled, and fixing or replacing the gauge mesh if it had been damaged. Task (3) consisted of cutting briars and other emerging vegetation during the spring season within a five foot radius of the gauge using clippers or weeding by hand. Task (4) was completed successfully in every data logger at each of the functional rain gauge locations. The strict weather requirements for conducting field calibration trials required multiple visits at two gauge locations (g #105 and #111) when developing rain or strong wind conditions made completion of the trials during the initial visit impossible. Unfavorable weather conditions forced the postponement of two scheduled treks (9 April 2022, and 6 May 2022), thereby delaying completion of the Spring 2022 gauge visit campaign.

Additional challenges encountered during some of the gauge visits in the spring 2022 were primarily the result of a strong winter storm that occurred on 3 January 2022. A tree was felled that landed directly on g #307 (Balsam Mountain Trail) that will require its replacement over the next month. A replacement gauge will be calibrated soon and transported, along with needed hardware and supplies to install it before the end of the spring season. The data logger and functional spare parts were retrieved from g #307 on the day of the initial visit (14 May 2022). Another continuous challenge continues to be the poor performance of the ML1 software ‘TA’ setting in the older loggers, which seems to have a poor time adjustment algorithm, forcing TA to be shut “off” until the next gauge visit. New data loggers have gradually replaced old loggers at the most remote rain gauge locations of the GSMNP. Fortunately, no data loggers were found to have run the battery completely down over the cool season, between November 2021 and May 2022. Hence, there was no loss of rainfall data over this period (other than at two gauges experiencing tampering by a bear and post January 3 at g #307) due to factors within our control.

Details of every gauge visit along with raw precipitation text and CSV format files are found via Google Drive <https://drive.google.com/file/d/1AN2sfEtrqIVo-1UwQQmVxGstA0VrD3l9/view?usp=sharing> which contains sub-folders for each gauge that consist of the individual data files (often having at least two different formats), pictures taken at the gauge site during the visit, screenshots of the GPS (laptop) and ML1 logger time comparison, and a MS Word document that mirrors the notes made in the field journal during each visit.

Noteworthy precipitation events of October 2021 – February 2022 as observed at KAVL are highlighted in yellow in **Appendix A**. The first and final month of the five-month period saw a significant amount of above normal rainfall, otherwise monthly amounts were below normal.

Plans for the summer months of 2022

Table 2: Planned gauge visits during the summer 2022 campaign. DD=gauge data download, MN=general gauge maintenance (cleaning, re-level), CA= rain gauge calibration, CV= vegetation clearing, ECC=electric contact cleaning treatment, and BR = data logger battery replacement.

Gauge visitation in support of the Duke GSMRGN during the summer 2022 will occur over at least eight days spanning July and August 2022. The primary purpose of the visits will be to download precipitation observations that were made since the previous gauge visits in March - May 2022 [DD in Table 2], perform maintenance and check if the ML1 logger times have drifted between visits and make the corresponding needed adjustments [MN in Table 2], and clear vegetation (and tree branches) from overhanging gauges [CV in Table 2], and electronic contact cleaning [ECC in Table 2]. Gauge parts and loggers may have to be replaced during some of the visits if less-than-acceptable conditions show no signs of improvement, as noted in the previous section description.

Details of every gauge visit along with each gauge precipitation record will be posted online and shall contain sub-folders for each gauge that consist of the individual data files (often having at least two different formats), pictures taken at the gauge site during the visit, screenshots of the GPS (laptop) and ML1 logger time comparison, and a MS Word document that mirrors the notes made in the field journal during the visit.

The technician roster during the 2021-2022 academic year consisted of Marlee Burgess, Jackson Coley, Daniel Fairchild, Michelle Hauser, Sarah Langille, Alice Monroe, Zachary Moss, Samuel Peterson, Taylor Ross, Paige Stedina, and Josh Ward. New undergraduate research students at UNC Asheville will be recruited as field technicians for the Duke GSMRGN project in the Fall 2022. Field technicians Marlee Burgess, Michelle Hauser, Alice Monroe, Samuel Peterson, and Taylor Ross graduated in May 2022.

Table 3: The Duke Great Smoky Mountain Rain Gauge Network is currently (valid as of 23 May 2022) composed of 32 tipping bucket rain gauges.
